

Shower Refurbishments

Nationwide

• Details

The schemes included both wet and dry areas and typically valued in the range of £300k to £400k. In order to maintain an operational facility, both careful phasing and the introduction of temporary cabin accommodation were often introduced.

We worked closely with the design team to ensure any existing defects (leaks, dampness etc) were redressed during the works. The inclusion of different shower heads and controls to improve heat efficiency and water usage; adequate extract and ventilation as well as cubicle choice and drainage installations were carefully managed to provide a safe, clean and easily maintainable facility upon completion.

Working closely with the club or centre management was fundamental in achieving the project on time and within budget.
